Resolving the 'ssh.service not found' Error [1](#) [2](#) [3](#)

When you encounter the error `ssh.service not found`, it typically means that the SSH server service is not installed or not recognized by your system. This can happen due to various reasons, such as incorrect installation or missing service files.

Example

```
sudo systemctl start ssh  
Failed to start ssh.service: Unit ssh.service not found
```

Steps to Resolve

1. Verify Installation

First, ensure that the OpenSSH server is installed on your system [1](#).

```
sudo apt-get install openssh-server
```

2. Check Service Name

On some systems, the SSH service might be named differently. Use the following command to list all services and find the correct name [2](#).

```
systemctl -l --type service --all | grep ssh
```

3. Start the Correct Service

Once you identify the correct service name, start it using:

```
sudo systemctl start ssh
```

4. Reinstall OpenSSH Server

If the above steps do not resolve the issue, try reinstalling the OpenSSH server [3](#).

```
sudo apt-get remove --purge openssh-server  
sudo apt-get update  
sudo apt-get install openssh-server
```

5. Check for Errors in Logs

If you still face issues, check the system logs for any errors related to SSH.

```
journalctl -xe | grep ssh
```

By following these steps, you should be able to resolve the `ssh.service not found` error and successfully start the SSH service on your system.
